Analyze, develop, and implement a web-based application for student uniform ordering

FEBRUARY – SEPTEMBER 2019
ANALYST & DEVELOPER / PT LEITER Indonesia
Develop and implement a web-based finance, order processing, KPI, dashboard system

Education

2016 - PRESENT
Student / Pelita Harapan University
I am studying in information system major under faculty of computer science. My current GPA is 3.79. Based on my grades and personal experience, some of my strongest subjects are System Analysis and design, Business Process Analysis, and Web development. For last one year, I've been working on some professional projects like developing web-based company profile and analyze and implement information system in companies.

2013 - 2016
Graduate / SMAK 1 Penabur Jakarta
I studied in SMAK 1 Penabur Jakarta in math science major. I learnt my soft skills when I was in high school. I learn how not to crack under pressure, how to survive and find solution for problems I faced. From grade point of view, it was not my best performance but from that experience, but it taught me how to fight, be optimistic hence I could pass through my difficult times.

Certification

CERTIFIED ETHICAL HACKER (CEH)

Desired Language

INDONESIA
ENGLISH

Joshua Natan in Another Side

How do I utilize my time:

- I do tutor. I like to teach, to communicate with other people. For me, teaching is an art. As a teacher we need to communicate something we have known well, to other people who is not even understand the subject.
- I learn some new programming language and try to implement them. I have my main goal and my plan to get there. But, I believe, sometimes our plan is not in line with the reality. Therefore, I plan my backup plan.
- I like to make freelance project. I do not work for the money. Personally, one of my main sources of joy is when I can understand what people want and translate them into a product which helps them doing their job or reach their dreams.

How do I keep optimistic:

- Every problem has its own solution and mostly, there are a lot of them. So our job is just to try one by one until the real solution comes up. There is no such a thing as 'no solution'. For me, it is just a matter of will.
- When I can not find a way and lose faith on it, I like to breakdown the problem into small pieces to analyze and find the bottleneck which keeps frustrating me. From that solution, I can be reminded that the main problem is not as big as I think.
